71% of the Earth's surface Is covered by water...

To Scale there are 970 mL In the beaker...
100% of the Worlds water...

970mL

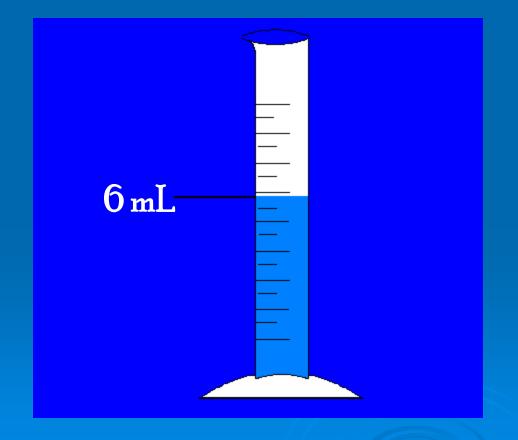

Minus 97% that
Is saline or salt water...
Leaving 29 mL

Minus the 80% that is frozen in Glaciers & at

the Poles.

That leaves 6 mL

Minus the 99.5% of that
Which is polluted or "trapped"
in the soil or too far underground
And that leaves about one drop for human
use and consumption

# Saratoga County Intermunicipal Stormwater Management Program:

A Coalition of County Government, Cornell Cooperative Extension & 15 Towns, Villages and Cities working to better manage Stormwater Runoff & Non-point Source Pollution for Better Water Quality

Ballston	Ballston Spa (V)	Charlton	Clifton Park
Greenfield	Halfmoon	Malta	Milton
Moreau	Round Lake (V)	Saratoga County	Saratoga Springs
So. Glens Falls (V)	Waterford	Waterford (V)	Wilton

#### Major water quality issues, World-wide

<u>Issue</u>	<u>Water</u> body	<u>Sector affected</u>	<u>Time</u>	<u>Extent</u>
Organic Poll.*	R, L, GW	Aquatic env.	<1 yr	Local-District
Pathogens*	R, L, GW	Human health	<1 yr	Local
Salinization	GW, R	Most uses	1-10 yr	Dist-Region
Nitrate*	R, L, GW	Health, Aquatic	>10 yr	Local-Region
Heavy Mtls*	All bodies	Health, Aquatic	<1-10yr	Local-Global
Organics*	All bodies	Health, Aquatic	1-10 yr	Local-Global
Acidification	R, L, GW	Health, Aquatic	>10 yr	Dist-Region
Eutrophication*	R, L	Most uses, Aquatic	>10 yr	Local
Sedimentation*	R, L	Most uses, Aquatic	1-10 yr	Local-Region
Dams/Diversions	R, L, GW	Most uses, Aquatic	1-10 yr	Dist-Region

# The National Picture (Why Stormwater Management?)

- Urban Runoff/Non-Point Source Pollution (NPS; pollution from diffuse sources) = 45% (avg) of pollutants in freshwater bodies & Estuaries
- #1 impairment to Estuaries & #2 for Lakes/Rivers
- The last major, identifiable, unregulated source of water pollution
- Crucial for prevention/protection of still healthy, developing watersheds (like we have in Saratoga County)

## The Local Snapshot

- $\frac{1}{2} 303 \text{(d) Listed water bodies (> 2\%)-Lake Lonely Tribs} \\ \text{(Phosphorous, C/BODs, pathogens), Dwaas Kill & Tribs} \\ \text{(Phosphorous, silt/sediment)} & \text{Hudson R.* (Mercury, Dioxins)} \\$
- $^{-20}$  fastest growing County in NYS (30.5% from 1980–2000)
- Avg approximately 1300 building permits a year
- One major watershed study (Saratoga L.)
- Snapshot data for Ballston Lake (CDRPC)
- \*\*Local-only planning & protection of lands adjacent to ponds, Lakes, Streams & Rivers = a *local issue*.

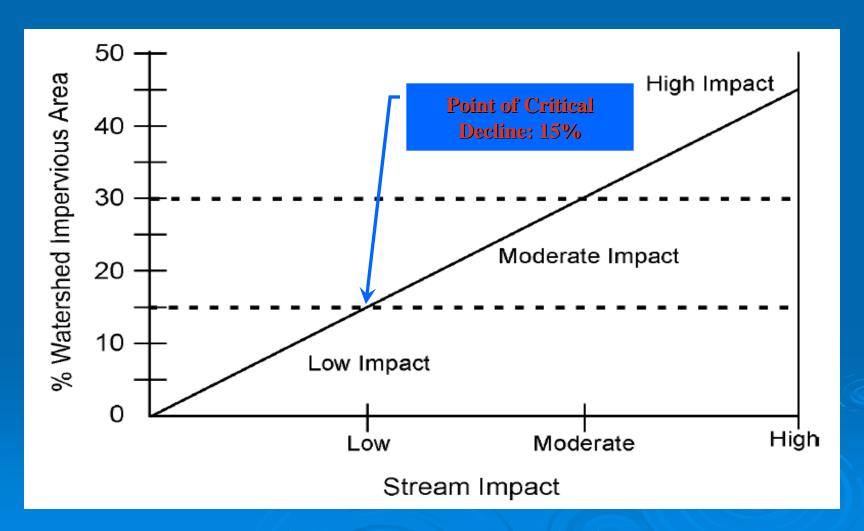

# THE PROBLEM? Runoff&...

- Improperly managed runoff increases "peak discharges" into our streams which causes...
  - streambank erosion
  - sediment loading

  - # flooding

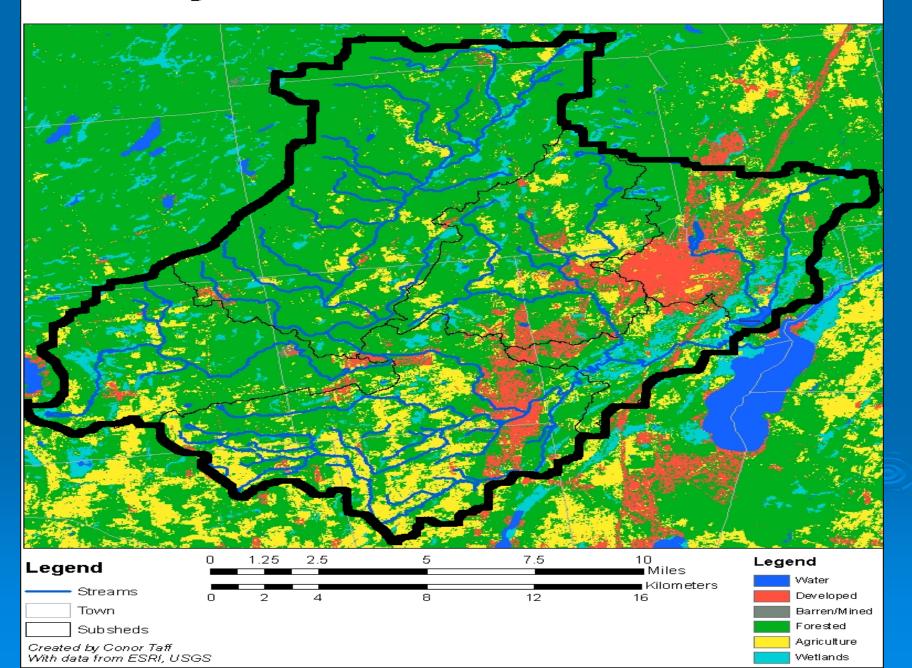

# Impervious Impact to watersheds

#### **Kayaderosseras Land Use**

# NPS...it's Everywhere. Everywhere?

NPS comes in many forms...

- <del>\*\*</del>sediments
  - **nutrients** 
    - <del>\*</del>toxics
  - **bacteria**
- **★** leachates
- sewer overflows
- æeven from the air...

# Out of sight, out mind, right? Yup...right into <u>our</u>waters!

When it rains, stormwater washes litter into nearby streams and rivers where it can remain for months, years or even eons:

Paper bag –	Plastic bottle –		
<u>1 month</u>	<u>430 years</u>		
Cigarette butt –	Aluminum can –		
<u>up to 5 years</u>	<u>200-500 years</u>		
Leather shoe –	Glass or Styrofoam container		
<u>45 years</u>	Approx. 1 million years		
Disposable diaper –	Source: American Rivers

#### Major Non-Point Pollutants in the Watershed

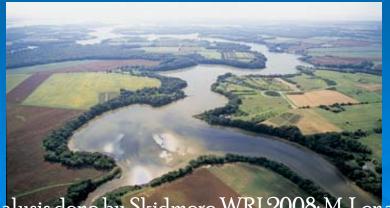

- 1. Sediment 720,650 lbs/year ...that's 36 <u>full</u> dump trucks!
- 2. Oil and Grease 58,748 lbs/year
- 3. Nitrogen 33,915 lbs/year
- 4. Phosphorous 6,857.09 lbs/year

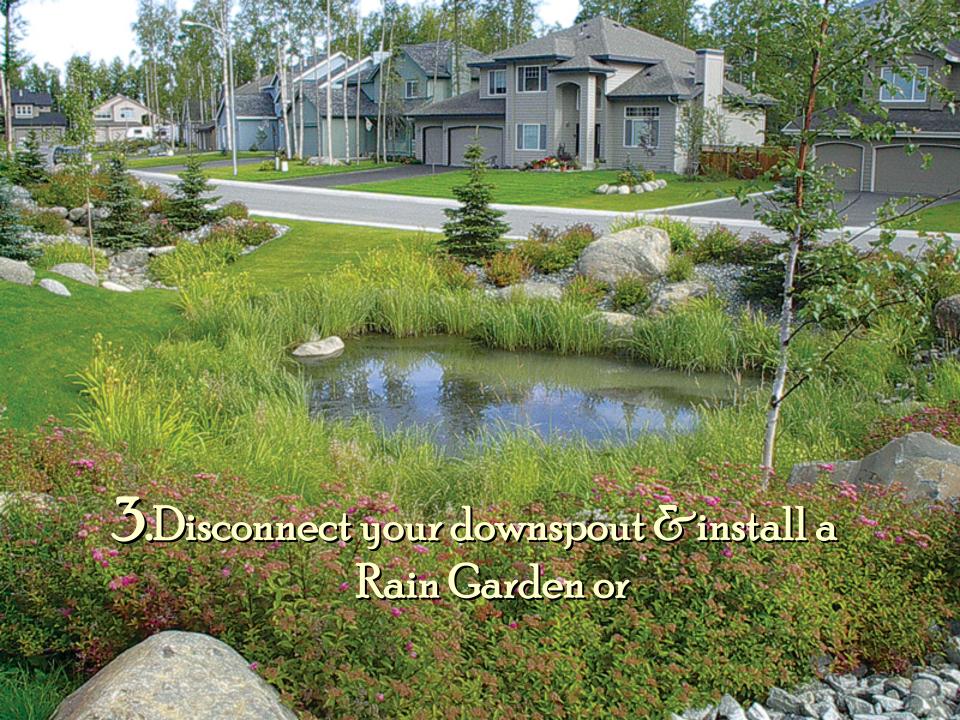

Original Analysis done by Skidmore WRI 2008; M. Lena; A. Polletta; J. Morten

### What Can We Do, Everyday, To Protect Our Water Resources?

1. Avoid over-fertilizing your lawn. Test your soil first!
2.Plant alternatives to turf grass such as native perennials and groundcovers, create vertical structure

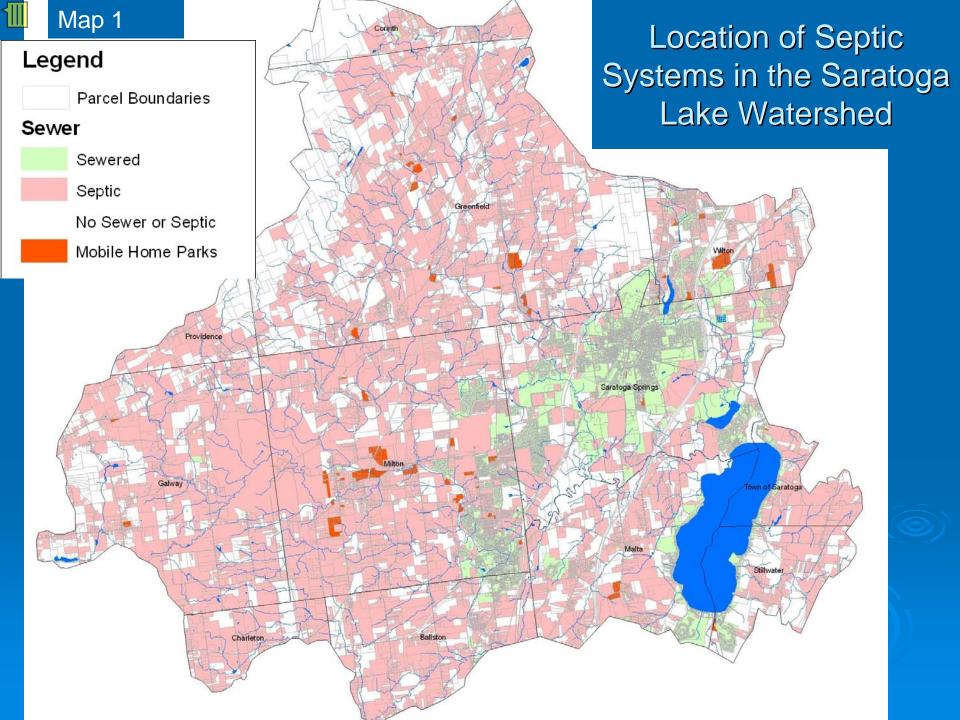

Here's looking at you

Running for the Water Cup

Klimt (Sayre School 3<sup>rd</sup> Grade Class)

### What Can We Do, Everyday, To Protect Our Water Resources?

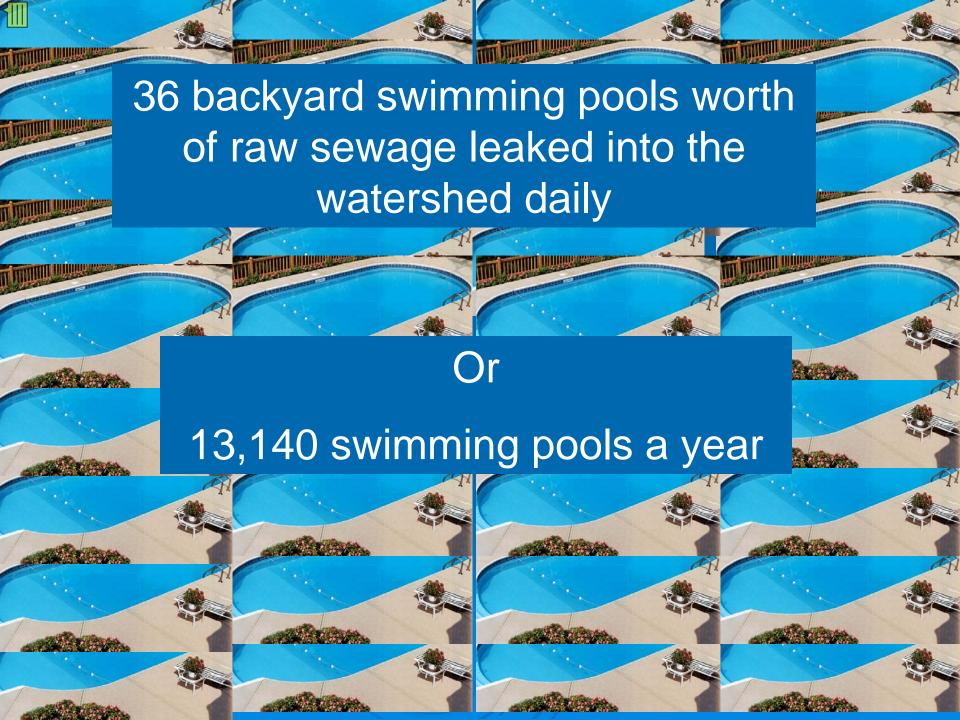

- 1. Avoid over-fertilizing your lawn. Test your soil first!
- 2.Plant alternatives to turf grass such as native perennials and groundcovers, create vertical structure
- 3.Disconnect your downspout install a Rain Barrel or Rain Garden
- 4. Maintain your Septic System & Properly collect and dispose of Pet Waste
- 5. Create a Stream or Shoreline buffer
- 6.Be an erosion and sediment control detective
- 7. Mow your lawn high & compost yard wastes
- 8. Wash your car on the lawn with bio-degradable soap

## The Septic Footprint

**10,000** Septic systems in the Saratoga lake Watershed (GIS parcel analysis)

- X 15% Average failure rate (EPA)
  - 1500 Failing septic systems in the Saratoga Lake Watershed
- X 2.51 Occupants per home (2000 Census)
- X 80 Gallons of water used per person per day (USGS)
- 301,200 Gallons of untreated wastewater entering the watershed daily

### What Can We Do, Everyday, To Protect Our Water Resources?

- 1. Avoid over-fertilizing your lawn. Test your soil first!
- 2.Plant alternatives to turf grass such as native perennials and groundcovers, create vertical structure
- 3.Disconnect your downspout install a Rain Barrel or Rain Garden
- 4. Maintain your Septic System & Properly collect and dispose of Pet Waste
- 5. Create a Stream or Shoreline buffer

# What Can We Do, Everyday, To Protect Our Water Resources?

#### 9. Get Involved!

The most important contribution that you can make to your Local Program and to Protect our water is to play an active role...ask you local government what they are doing and find out how you can participate.

10. If you see a problem contact your local government or...
